

AsliJobs — Master Project Documentation

Version: Generated from current codebase (read-only analysis)
Audience: Developers, QA, Designers, Product, Clients
Scope: Entire monorepo — `frontend/` , `backend/` , `admin/`
Rule: Documents only what exists in source code. No assumed features.

1. Project Overview

Item	Value
Project name	AsliJobs
Legal / company	Propenu Solutions Pvt Ltd. (<code>frontend/src/constants/site.ts</code>)
Site name	AsliJobs.com
Tagline	India's Trusted WhatsApp Job Network
Project type	Production multi-app hiring platform (monorepo)
Purpose	Connect employers with blue- and grey-collar job seekers via WhatsApp-first hiring workflows
Target users	Employers (owners + team members), Job Seekers, Internal Admin (stub)

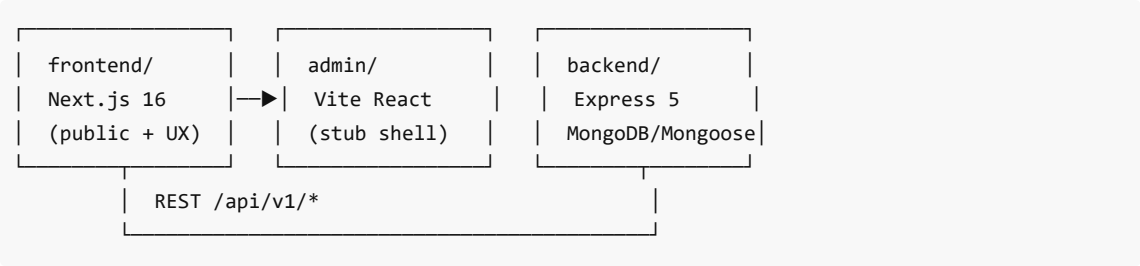

Main features (implemented)

- Public job discovery and job detail pages
- WhatsApp OTP registration/login for employers and job seekers
- Employer job posting (wizard / draft / publish / status / cascade delete)
- Job seeker apply flow with resume snapshots
- Employer candidate pipeline (status, shortlist, notes, export)
- Interviews (embedded on applications; list, calendar UI, schedule/cancel)
- Saved jobs (seeker) and saved/shortlisted candidates (employer)
- Notifications inbox; employer messages as application-threaded conversations
- Team management (departments, roles, members, invitations) with RBAC + field-level access
- Company profile, settings, reports/analytics/campaigns/subscription pages (some UI shells)

Business flow (core hiring)

```
Employer registers (OTP) → Completes company profile / documents
→ Creates & publishes Job
→ Job Seeker registers / logs in (OTP)
→ Applies with active Resume
→ Application appears in Employer Candidates
→ Shortlist / Save candidate
→ Schedule Interview (on application)
→ Hiring outcomes (offer / hired / reject via status APIs)
```

Architecture overview

Three applications share one API. Admin is present with role types defined but only a home route implemented. Backend placeholder folders (campaigns , admin , etc.) are not mounted.

2. Technology Stack

Frontend (frontend/)

Area	Technology
Framework	Next.js 16.2.10 (App Router)
UI	React 19.2.4
Language	TypeScript 5
Styling	Tailwind CSS 4 (@tailwindcss/postcss), globals.css @theme
Icons	lucide-react, bootstrap-icons
Forms	react-hook-form, @hookform/resolvers, Zod 4
Data	TanStack React Query 5, Axios
Utilities	clsx, tailwind-merge
Font	Inter via next/font/google

Backend (backend/)

Area	Technology
Runtime	Node.js (ESM), Express 5
Language	TypeScript 5.9, tsx
Database	MongoDB via Mongoose 8
Auth	JWT (jsonwebtoken), bcryptjs
Validation	Zod 4
Uploads	multer
Storage	Local disk and/or Cloudinary
Email	Resend

WhatsApp	Meta WhatsApp Cloud API (OTP when configured)
Exports	exceljs, pdfkit
Security	helmet, cors, cookie-parser, express-rate-limit
Logging	morgan

Admin (admin/)

Area	Technology
Build	Vite 8, React 19, TypeScript
Routing	react-router-dom 7
Styling	Tailwind 4
Data	TanStack Query, Axios
Forms	RHF + Zod
Charts	recharts
Icons	lucide-react

Not present in repo

- Docker / docker-compose / CI workflows / vercel.json
- AWS S3 SDK usage
- Google Maps API client (employer location suggestions are DB-derived)
- Root README

3. Repository Structure

```

4. Applications & Users

App	Users	Auth
Public website	Anonymous visitors	Optional job seeker JWT for applied state on public jobs
Employer workspace	Employer owners, team members	Workspace JWT (OTP for owner; email/password for members)
Job seeker workspace	Job seekers	Job seeker JWT (WhatsApp OTP)
Admin	Role types defined (SUPER_ADMIN, OPERATIONS, ...)	Not wired to backend routes yet

5. Design System (summary)

Full detail: [AsliJobs Design System Documentation.md](#)

Topic	Current state
Font	Inter only (next/font/google)
Colors	72 semantic tokens in frontend/src/app/globals.css @theme
Primary brand	#0e8585 / soft CTA #00baa5 / accent #ffd54f
Logo	frontend/src/assets/AsliLogo.svg (213×70)
Tailwind	v4 CSS-first; no tailwind.config.ts
Buttons	No shared Button primitive — pattern-based Tailwind classes

6. Authentication & RBAC (summary)

Full detail in Employer / API docs.

Flow	Mechanism
Employer login	WhatsApp OTP → workspace access + refresh tokens in localStorage
Job seeker login	WhatsApp OTP → job seeker tokens in localStorage
Team member login	Email/password → same employer workspace token storage

Refresh / logout	/api/v1/auth/workspace/* and /api/v1/auth/job-seeker/*
Employer RBAC	Modules: dashboard, jobs, candidates, interviews, messages, campaigns, reports, subscription, company_profile, team_management, settings
Actions	create, read, update, delete, export, fullAccess
Field access	hidden / view / mask / edit per role

7. Frontend Pages (inventory)

Total App Router pages: 49

Area	Count	Examples
Public / marketing	13	/, /jobs, /post-job, legal pages
Employer	28	dashboard, jobs, candidates, interviews, team, settings
Job seeker	11	dashboard, profile, resume, applied/saved jobs
Team cross-flows	2+	/team-member/login, /team/accept-invitation

Constants: `frontend/src/constants/routes.ts`

Detailed page lists: Excel [AsliJobs Page List](#) and module docs.

8. Backend Modules & API

Mounted under `/api/v1` : auth, employers, jobs, jobseekers, resumes, applications, saved-jobs, saved-candidates, notifications, team.

Health: `GET /api/v1/health`

Approximate authenticated/public endpoint count: ~110+ route definitions (see API list).

Placeholder module folders exist but are **not mounted**: admin, campaigns, interviews (standalone), placements, subscriptions, support, users, shared.

9. Database (summary)

16 Mongoose models — see [AsliJobs Database Architecture.md](#)

Core entities: Employer, JobSeeker, Job, Application, Resume, SavedJob, SavedCandidate, Notification, TeamMember, TeamRole, TeamInvitation, Department, TeamActivity, JobView, JobCounter, EmployerDocument.

Interviews/offers/shortlist metadata are **embedded on Application**, not separate collections.

10. Integrations

Integration	Purpose	Config (env names)
-------------	---------	--------------------

MongoDB	Persistence	MONGO_URI
JWT	Auth	JWT_ACCESS_SECRET, JWT_REFRESH_SECRET, ...
Cloudinary	Optional file storage	CLOUDINARY_*, STORAGE_PROVIDER
Local uploads	Default storage	UPLOAD_DIR, STORAGE_PROVIDER=local
Resend	Team invitation email	RESEND_API_KEY, EMAIL_FROM
WhatsApp Cloud API	OTP delivery	OTP_PROVIDER=whatsapp, WHATSAPP_*
Console OTP	Dev OTP	OTP_PROVIDER=console

11. State Management & Performance

Concern	Implementation
Server/client data	TanStack Query (QueryProvider, default staleTime 60s)
Auth session	localStorage tokens + custom window events
Employer RBAC client	Permission provider + React Query session
Lists	Offset pagination utilities; page size options per feature
Cascade job delete	Invalidates jobs, applications, interviews, saved-candidates, notifications, messages caches

12. Security

Control	Implementation
Transport headers	helmet
CORS	Configurable origins (FRONTEND_URL, ADMIN_URL, ...)
Rate limiting	Login/register/team invitation limiters
Input validation	Zod at route boundaries
Authorization	JWT + requirePermission / field access
Passwords	bcryptjs (team members)
Secrets	Environment variables via validated env.ts

13. Workflows (existing)

Employer registration

Register → OTP verify → Company profile / identity document upload → Login → Dashboard

Job lifecycle

Create / draft → Publish → Pause/close/reactivate → Single or bulk delete (cascade related hiring data)

Application lifecycle

Seeker applies → Employer views → Status updates / shortlist → Interview schedule/cancel → Hiring fields → Optional export

Team onboarding

Invite member → Email (Resend) → Accept invitation → Set password → Team member login → RBAC-scoped dashboard

Notifications / messages

Domain events create notifications → Inbox for both roles → Employer conversations grouped by `application referenceId`

14. Admin Application Status

- Tech stack ready (Vite + React Router + Query + Recharts)
 - Routes: only `/` → `HomePage`
 - Role enum defined: SUPER_ADMIN, OPERATIONS, SUPPORT, MARKETING, CONTENT_LANGUAGE, SALES
 - No backend admin router mounted
-

15. Documentation Index

See [AsliJobs Project Index.md](#) for links to all documents in this suite.

16. Validation

This master document was produced from read-only inspection of `frontend/` , `backend/` , and `admin/` source. Features that exist only as empty folders, stub pages, or unmounted routers are labeled accordingly and are not described as production-complete APIs.
